

For Immediate Release

Lock Jaw™ Security Offers an Effective and Affordable Way to Protect the Home from Lock Bumping, Even Deadbolts

Tonganoxie, Kansas - March 2007 – **Lock Jaw™ Security** introduces the key to protecting the home against intruder invasion. Just in time to combat the rising lock bumping crime epidemic, **Lock Jaw** offers a full proof \$25 solution for almost all single cylinder residential deadbolt locks.

Lock bumping is the lock picking technique in which a blank key is distorted and can be tapped into a lock or deadbolt and turned like the lock's actual key. Unfortunately, this technique is now easily available on the internet and can be performed on almost every lock with minimal effort and little-to-no expertise* -- unless the lock is equipped with **Lock Jaw**.

Lock Jaw works by preventing the bolt of a deadbolt from being retracted, keeping the door locked. It can be installed in less than 5 minutes with 2 small screws that attach only to the door or there are many ways for temporary set up. **Lock Jaw** is easily engaged and/or disengaged.

Lock Jaw works with any thumb latch configuration.

Lock Jaw prevents, not delays, deadbolts from being picked. **Lock Jaw** is the perfect protection for houses, apartments, condos, dorm rooms and ANY door with a deadbolt. There is no other product on the market that can do what **Lock Jaw** does and at minimal cost.

For more information or to purchase **Lock Jaw** security, consumers can visit www.lockjawsecurity.com

*Kentucky's WAVE 3-TV reports that "No traditional lock is bump proof."
